

Reduce risk from data loss in Multi-Cloud protection and recoverability

Safe Hands

ID Technologies' Data Management Platform-as-a-Service Safeguard your Data and Improve Your Ability to Know, Manage and Use your Data with ID Technologies' Data Management Platform-as-a-Service

Keep your data safe Anywhere your Data resides and enhance your data management approach by employing enterprise class Data Management services designed for ease of consumption at cost effective pricing.

Data created and managed by IT systems is an important asset, which requires protection. Data drives business operations, decisions and innovations yet, data volumes continue to explode and are increasingly fragmented across devices, locations and providers. The number of data sources and formats are similarly becoming more varied and complex. Protecting data assets has become complex and difficult.

The ID Technologies' Data Management Platform-as-a-Service, powered by Commvault, enables you to choose a data protection plan that aligns with the business value of the data to cover these gaps and deliver data governance that meets these new demands.

5 Ways ID Technologies's Data Management Service Improves Use of Your Data

Minimize your data footprint – Identify and remove obsolete data that is driving up your storage costs, degrading performance and clouding the visibility for compliance, security and business intelligence.

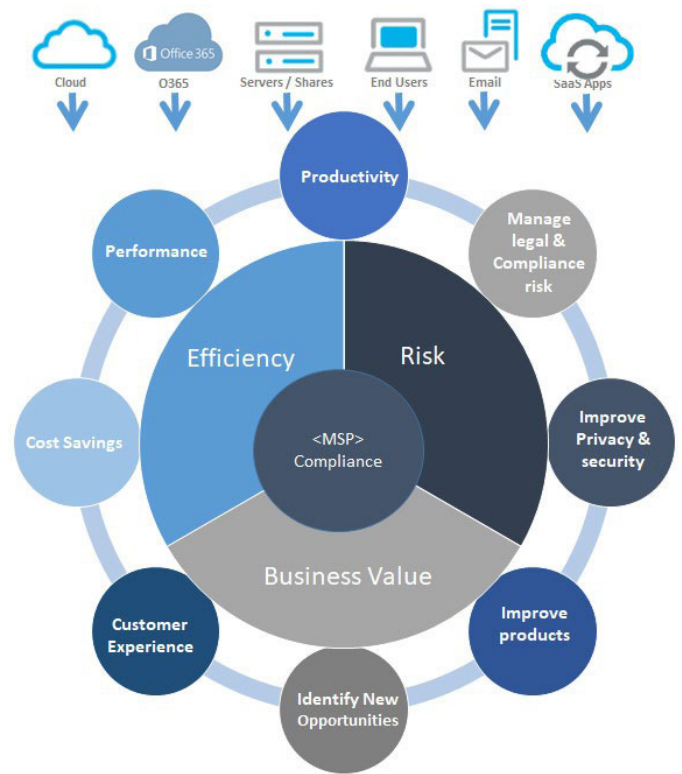

Eliminate risk data spots – Extend risk management and compliance enforcement to unstructured & semi-structured data.

Make "Readiness" a Reality – Leverage an efficient means of achieving Backup & Recovery and Compliance readiness from a single platform.

Accelerate value extraction – Avoid the delays, costs and complexities of "big data experiments".

Simplified administration – Seamlessly manage your data governance across your entire environment through a single, integrated user experience.

Guarantee compliance and security – Encryption, granular, policy-based controls, all-inclusive data collection and high-speed search and discovery deliver the compliance and security options needed for even the most regulated data and applications.

Benefits of ID Technologies' Data Management Platform as-a-Service

Feature	Advantage	Customer Benefit
Enterprise class data protection	A fully integrated single suite of data management and protection capabilities	Ensuring alignment to your business strategy, as well as your security and compliance requirements
IaaS, managed hosting, and on-premise support	Flexibility to back up from multiple environment scenarios	You can use the same platform to backup your servers and endpoints and recover data between servers and endpoints regardless of their location
Pay for only what you use	No need to plan and pay for hardware, software and usage that is not actually consumed	Consumption-based pricing – for example per GB, per endpoint device etc.
Capacity planning	Remove the pain of how to plan your Data Management capacity needs	Capacity issues are taken care of by ID Technologies – Reliable solution that scales with your needs
Platform availability	Use backup in a HA redundant configuration	Business continuity
Client-side de-duplication	Only backup data if it's unique	Faster backup, less data to store, greater cost savings
Compression	Store data in compressed format	Cost savings and less data to store
Encryption on the wire	All data crossing the servers is encrypted	Security is fully integrated through advanced authentication and encryption protocols. Secure data and compliance
Encryption at rest	All data stored is encrypted	Security is fully integrated through advanced authentication and encryption protocols. Static data security and compliance
Multiple different portfolio plans	Flexible plans to meet your cloud backup requirements	Pay for only what you need
Choice of plans by server	Maximum control over backup configuration	Pay for only what you need
Choice of retention periods by server	Maximum control over backup configuration	Pay for only what you need
Backup files	File system backup	Flexibility to backup any files
Choice of long-term retention for your data	Decide on your data's long-term retention requirements per server	Pay for only what you need
Windows and Linux support	Same backup, regardless of your choice of OS	Coverage for the entire application stack
Active Directory Integration	Control data visibility	End users will only see the data if they have the permissions to do so
Data Security and Privacy	Data Privacy is enabled by default	ID Technologies administrators cannot view customer data in any way
Data Portability and Orchestration	Migration strategy of legacy environments to the new platform	Speeding data migration of workloads including transforming physical to cloud virtual
Evergreen	Removing your need to own, support and refresh in the lifecycle of an infrastructure	Significant initial CAPEX and ongoing OPEX cost elements are removed
Governance throughout the data lifecycle	Apply active governance from when data is created based on content context and your business need	Allowing you to think of data not as a business challenge, but as a critical strategic asset
Native Connectivity to the cloud, Efficient data transfer and Automated Cloud Workload Creation	Providing simple and scalable means to extend data copies in the cloud while optimizing cloud storage consumption and providing on demand use for cloud Disaster Recovery	Modernized approach to cloud Disaster Recovery means higher reliability and lower cost enabling data governance to span to the Cloud
